DOH and PhilHealth

25 years of Health Care Reform review:

- **The poor did not benefit from the 25 years of Health Care Reforms**
- “It is mainly the higher income groups who are able to access health care services”
- The major health policy advisers of the DOH during this period - the USAID funded UP School of Econ health economists – conflict of interest again!

Lgus

Most but not all LGUs look at health simply as medical missions

A few LGUs are addressing the Dengvaxia fiasco

VACCINES ACCESS

More than 3 million lives saved in the world every year..., but more than 3 million people still die due to a lack of access to existing vaccines.

Sanofi Pasteur wants everyone to have access to its existing vaccines – no matter where they live.

The cost of vaccine administration, weak health systems, and in some cases conflict, mean that many people living in the world's poorest countries do not have access to vaccines. We have ongoing partnerships with a number of international organizations including the World Health Organization (WHO), the United Nations Children's Fund (UNICEF) and the Red Cross, through which we supply vaccines where they are needed most. For them, we have developed adapted presentations and implemented tiered-pricing policies.

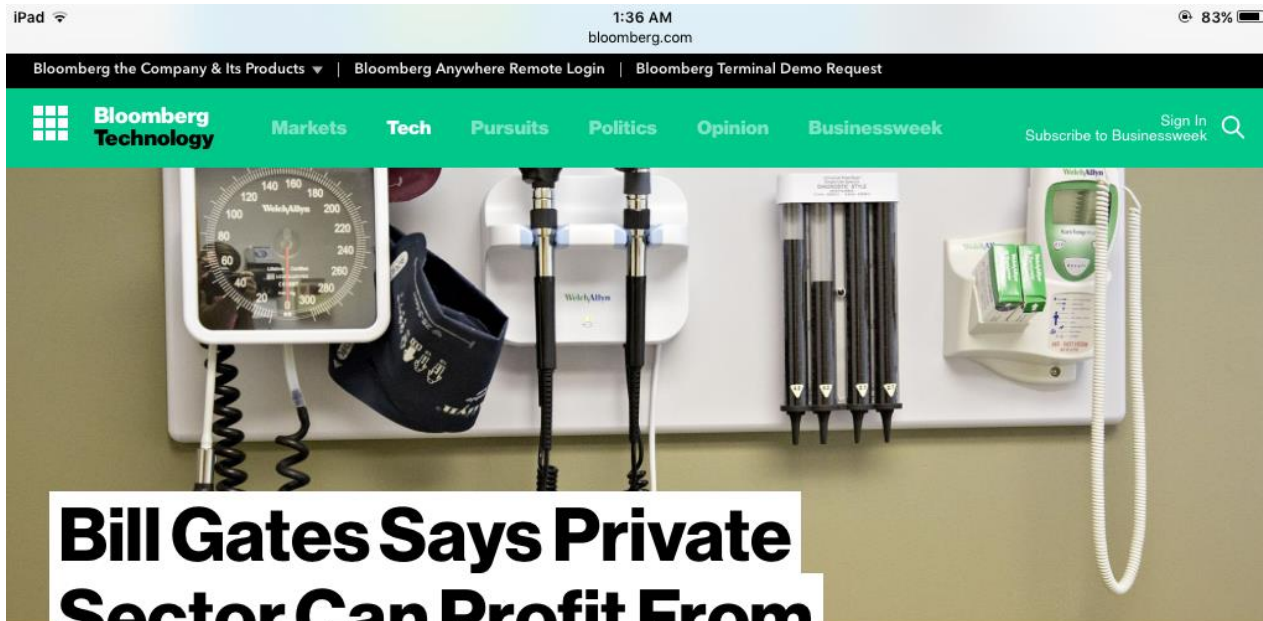

GAVI – founded in 2000 by BGF, the WB, WHO, Unicef & vaccine manufacturers, incl SANOFI

THE GLOBAL ALLIANCE FOR VACCINES AND IMMUNIZATION (GAVI Alliance)

GAVI Alliance was founded in 2000 by the Bill & Melinda Gates Foundation, the World Bank, WHO, UNICEF and vaccine manufacturers, including Sanofi Pasteur. Committed to saving children's lives and protecting people's health through the widespread use of vaccines, GAVI Alliance's driving objective is to make a critical contribution to global immunization goals by supporting immunization programs and health systems, and accelerating the introduction of new vaccines. Sanofi Pasteur shares GAVI Alliance's objectives to improve the infrastructures required for proper vaccine administration and to encourage research and development programs focused on diseases that predominantly affect developing countries, and has historically practiced a policy of tiered pricing to facilitate access to vaccines in GAVI Alliance countries.

Bill Gates Says Private Sector Can Profit From Public Health

Photographer: Daniel Acker/Bloomberg

DHHS | CDC

The Bill & Melinda Gates foundation bought a stake in Anacor Pharmaceuticals Inc. in 2013 to encourage it to work on neglected diseases and sold it 3 years later – making a return of 17%!

Medical Doctors' statement on the Dengvaxia controversy:

“The only way to continue to prevent deadly epidemics of these infectious diseases is to sustain a high rate of vaccination in our population.”

- Granted, some vaccines have been effective in addressing some infectious diseases: smallpox, polio, measles (our present EPI)
- But the P3.5B Dengvaxia? Is it the only way? Or the most effective way ?

Comprehensive primary health care: a pathway to social inclusion and improved health

Allen, Jacqui, [Lim, David](#), Walker, Joanne, Croager, Emma, & Tham, Rachel (2013) Comprehensive primary health care: a pathway to social inclusion and improved health. In Moore, Michael R., Earnest, Jaya, Heron-Dowling, Rebecca, Graham, Melissa, Schultz, Rosalie, Keleher, Helen, et al. (Eds.) *42nd Public Health Association of Australia Annual Conference : A "Fair Go" for Health: Tackling Physical, Social and Psychological Inequity*, 16 - 18 September 2013, Hilton on the Park, Melbourne, Victoria. (Unpublished)

Abstract

Originating from the World Health Organization of *alma Ata* in 1978, the philosophy of Comprehensive Primary Health Care (CPHC) includes the interconnecting principles of equity, access, empowerment, community self-determination and intersectoral collaboration in order to achieve better health outcomes for all people. It encompasses addressing the social, economic, cultural and political determinants of health. CPHC when implemented correctly should lead to social inclusion. However, implementing CPHC is complex due to misunderstandings about what it encompasses and about how to achieve the intended goals. This workshop aims to explore a range of issues that are tackled through a diverse range of primary health care services that target: community health, youth mental health, HIV/AIDS, homelessness, and marginalised disadvantaged groups.
